Prosaposin is a 70kDa glycoprotein which is proteolytically processed to generate saposins A, B, C and D, all of which are similar to each other and and ave a similar placement of six cysteines, a glycosylation site and conserved proline residues. Prosaposin, saposin C and prosaposin derived conserved proline residues. Prosaposin, saposin C and prosaposin derived conserved proline residues. Prosaposin, saposin C and prosaposin derived conserved proline residues. Prosaposin conserved proline receptor agonists (PRAs) inhibit proinflammatory cytokine-inherited lesions to the pertpheral and central nervous system.

C induced apoptosis by activation of the Ser/Thr protein kinase Akt. Akt dissociates complexes of Bcl-2 family members, such as BAD-Bcl-2, releasing Bcl-2 and its family members, such as BAD-Bcl-2, inhibiting apoptosis An additional mechanism whereby PRAs inhibit apoptosis. An additional mechanism whereby PRAs inhibiting apoptosis and its family members which inhibit caspases, thereby inhibiting apoptosis. The activation induced by tumor necrosis factor-alpha (TNF alpha).

C component. Within several minutes after binding to the receptor, PRAs blocking activation of JNK by TNF alpha is another well known mechanism for TNF alpha-induced, as well as other proinflammatory cytokine-induced apoptosis. The method can be used for inhibiting apoptosis and approsicated with a disorder such as even for inhibiting apoptosis associated with a disorder such as even for the second influencephalities, progressive multifocal leukoencephalities, progressive multifocal leukoencephalities, progressive multifocal leukoencephalities, progressive multiple sclerosis, acute disseminated inflammatory disease, fathemic heart disease, dishamatory disease, duillain-Barre disease, traumatic brain disease, duillain-Barre disease, traumatic brain disease, multiple colerosis, duillain-Barre disease, traumatic pluy, raumatic spinal cord injury, alopedis, AlDS demental controlation and disease, multiple sclerosis, duillain-Barre disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180

The invention is based on the discovery that saposin B, previously known to be involved in the hydrolysis of sphingolipids, has potent antiangiogenic and antitumour activity, and also has antiproliferative and antimigratory activity against endothelial cells. This activity is conserved in cryptic polypeptides as small as 5 amino acids (see AAYS8684 -715), which can be synthetically prepared and used in vitro or in vivo for the treatment of undesired anglogenesis and tumor growth, especially

The invention relates to a mammalian cell receptor, useful in the creatment of cancer, which binds to tumour associated lights and induces anergy or apoptosis in the T cells and antigan presenting cells (APCe).

Also included are a mammalian cell useful in the treatment of cancer where the receptor which binds to meet the treatment of cancer where the receptor which binds the deleted or functionally deactivated, producing (MI) a tumouricidal immunocyte appliantolytes in which cellular inactivation or death is deleted or functionally deactivated, producing tumour associated lipids to contact immunocytes in which creeptors for immunosuppressive fatty acids, ceramides, glycolipids, phinopolipids, phosphosphingolipids, gangliosides, sphinopolipids, lipopeptides and protecglycolipids are inactivated or deleted) a construct useful in the treatment of cancer (comprising a lipopeptide inserted into a virus a mammalian T cell useful in the treatment of cancer (comprising a lipid tate conjugated to a superantigen (SAg nucleotal immunocyte population asful in the treatment of cancer (comprising a lipid and tate of the contact immunocytes, in which cancer (comprising a lipid at the conjugated to a superantigen), producing (M) a tumouricidal immunocyte population, and administering the tumouricidal immunocyte population, and administering the tumouricidal immunocytes population, and administering the tumouricidal oppulation of vivo in a mammal loy allowing a tumouricidal of context APCe, in which redeptors for the tumouricidally activated published to context APCe, in which adaptor proteins, which inhibit T cells and administering the tumour associated antigens of context colls to produce a tumouricidally activated T cells to the host, or administering the tumour associated antigens or context cells activated or deleted or produce a tumouricidal population in vivo in a mammal loy allowing a tumouricidal T cells of unduringential presention in vivo in a mammal context cells activated or cells evivor and administering the tum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the printed specification, but was obtained in electronic format from the US patnet office website at
                                                                                                                                                                                                                mammalian cell receptor, useful in the treatment of cancer by binding tumor associated lipids where the binding induces anergy or apoptosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            fusion constructs with anti-tumour proteins or motifs. The present sequence represents a tumour antigen or a motif identifying a tumour antigen, which can be functionally deactivated in the method of the invention. Note: The sequence data for this parent did not form part
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             segdata.uspto.gov/sequence.html?DocID=20020177551"

```
the invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MRC-binding polypeptide. The polypeptides and plymucleotides are particularly useful for treating or preventing or preventing myeloma, colon cancer, gastric cancer, reating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an treating the above mentioned diseases. This sequence represents an profilling. Note: This sequence does not appear in the printed grown WIPO at apecification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          360

fragment of a kinase, phosphatase, protease inhibitor, fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskelatal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and compounds that binds to a sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an treating the above mentioned diseases. This sequence represents an profiling. Note: This sequence does not appear in the printed profile the compound of the compound of the printed format directly from WIPO at the printed for the compound of the printed format directly from WIPO at the compound of the compound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

transporter, cytoskeletal protein, troceptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic composition for eliciting in a cammal an immunogenic response directed against any of the purified polypeptide, or the antibody that binds to polypeptide. The purified polypeptide, or the antibody that binds to the purified polypeptide, or treating cancer. The polypeptide is also polypeptide, is useful for treating compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polymentic cancer, adenocarionan, melanoma, myeloma, colon cancer, gastric cancer, adenocarionan, astrona, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an profiling. Note: This sequence does not appear in the printed from WIPO at gpecification but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Translational profilling, expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MHC;

The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for treating cancer. The polypeptide is also useful for treating polypeptide. The polypeptide is also useful for binds to a naturally processed class I or class II MiC-binding polypeptide. The polypeptides and polymucleotides are particularly useful for treating or preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Translational profiling, expressed protein tag, EPT; kinase, phosphatase, protease, protease inhibitor; transporter; cytoskeletal protein; reseptor; transcription factor; cancer; WHG; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma or
                                                                                                                                                                                                               New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for

                                                                                                                                                                                                                                                                                                                                                셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide, or the antibody that binds to this polypeptide. The purified polypeptide, or the antibody that binds to this cuseful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptide is also cuseful for class II MHC-binding polypeptide. The polypeptides and polymentical cancer, adenocarcinoma, sarcoma, melanoma, clon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, clumphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein age (BFP) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed companied in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences

New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma or

treating

leukemia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  phosphatase;
myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expenseed protein tag (EPT) isolated from human tissue for translational profilling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.

The invention describes a purified polypeptide, which comprises a fragment of a kinase, phospharase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The transporter is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified of polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide. The useful for traating cancer. The polypeptide is also cuseful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polymenticleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, claukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an concerning and the above mentioned diseases. This sequence for translational concerning the above mentioned diseases. This sequence does not appear in the printed profiling. Note: This sequence does not appear in the printed from WIPO at the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             420

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide. The purified polypeptide, or the antibody that binds to this consecution is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class In MiC-binding polypeptide. The polypeptides and consecution cancer, gastric cancer, intenting or preventing melanoma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (BFP) isolated from human tissue for translational consecution but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Translational profiling, expressed protein tag, EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; reseptor; transcription factor; cancer; WHC; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.

                                                                                       ઠ
                                                                                                                                                                                                                                                                                                  The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide. The susful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (BFP) isolated from human tissue for translational profiled in electronic format directly from WIPO at appearing the printed

fragment of a kinase, phosphatase, protease, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor.

I transporter, cytoakeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polymucleotides are particularly useful for treating or preventing polymucleotides are particularly useful for treating or preventing compounds that binds to a screening agents for treating the above mentioned diseases. This sequence represents an treating the above mentioned diseases. This sequence for translational profiling. Note: This sequence does not appear in the printed profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences
                                                         Translational profiling; expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MTC; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified onlypeptide. The purified polypeptide, or the antibody that binds to the purified polypeptide, is useful for transing cancer. The polypeptide is also conformed that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides are particularly useful for treating or preventing polymucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, Irmanema or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents and treating the above mentioned diseases. This sequence represents concernated profiling. Note: This sequence does not appear in the printed from WIPO at the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               fragment of a kinase, phosphatase, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide. The purified polypeptide is useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polymuleotides are particularly useful for treating or preventing myeloms, colon cancer, adenocarcinoms, asrcoma, melanoms, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an treating the above mentioned diseases. This sequence represents an profiling. Note: This sequence does not appear in the printed profiling to but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Saposin precursor [validated] - human
N;Alternate names: cerebroside sulfate activator protein; co-beta-glucosidase; component
sin (SAP); sphingolipid activator protein A2; sulfatide sulfatase activator protein
N;Contains: prosaposin; saposin A; saposin B; saposin C; saposin D
C; Species: Homo sapiens (man)
C; Date: 30-Jun-1992 #sequence\_revision 17-Nov-1995 #text\_change 09-Jul-2004
C; Accession: JV0661; AB7368; A2003; B42003; D42003; D42003; A30367; S34740; S36140; S36

MyAlternate names: cerebroside sulfate activator protein; co-beta-glucosidase; component NyAlternate names: cerebroside sulfate activator protein; co-beta-glucosidase; component ein (SAP); sphingolipid activator protein A2; sulfated glycoprotein 1; sulfatide sulfata N;Contains: prosaposin; saposin B; saposin B; saposin D; saposin D; cjspecies: Mus musculus (house mouse)
Cjspecies: Nus musculus (house mouse)
Cjoate: 10-Sep-1999 #sequence_revision 10-Sep-1999 #text_change 09-Jul-2004
CjAccession: JH0604
B;Tsuda, M.; Sakiyama, T.; Endo, H.; Kitagawa, T.

NiAlternate names: carebroside sulfate activator protein; co-beta-glucosidase; component
ein (SAP); sphingolipid activator protein A2; sulfated glycoprotein 1; sulfatide sulfate
NiContains: prosaposin, saposin A3; saposin C; saposin D;
C;Species: Rattus norvegicus (Norway rat)
C;Species: Rattus norvegicus (Norway rat)
C;Species: Name of Saposin A2; saposin D;
C;Date: 10-Sep-1999 #sequence_revision 10-Sep-1999 #text_change 09-Jul-2004
C;Accession: A28716

A;Experimental source: liver
C;Function: saposins bind sphingolipids, form hydrophilic complexes and make them acc
A;Description: saposins and C (SAP-2) activate hydrolysis of galactocerebroside by beta-glucosy
A;Dote: saposins A and C (SAP-2) activates hydrolysis of galactocerebroside sulfate by arylsulf
A;Note: saposin B (SAP-1) activates hydrolysis of sphingomyelin by sphingomyelin phosphodiestera
A;Note: saposin D activates hydrolysis of sphingomyelin by sphingomyelin phosphodiestera
A;Note: saposin D activates hydrolysis of sphingomyelin by sphingomyelin phosphodiestera

Glucosylceramide beta-glucosidase activator protein SAP-2 - guinea pig
Glypecies: Cavia porcellus (guinea pig)
Glypecies: Cavia porcellus (guinea pig)
Glypecies: Or-Jun-1990 #sequence_revision 07-Jun-1990 #text_change 09-Jul-2004
Glycesesion: A32026
Fisano, A.; Radin, N.S.; Johnson, L.L.; Tarr, G.E.

1852.779 Million cell updates/sec Title: US-10-801-517-1 .
Perfect score: 2789
Sequence: 1 MYALFLLASLLGAALAGPVL......NTETAAQCNAVEHCKRHVMN 524

Scoring table: BLOSUM62 Gapop 10.0 , Gapext 0.5 Searched: 2166443 segs, 705528306 residues

Total number of hits satisfying chosen parameters: 2166443

Minimum DB seq length: 0
Maximum DB seq length: 2000000000
Dost\_nyocosing: Minimum March 08

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
